Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

User information

Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0^s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- p preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- E use with caution
- F too unreliable to be published
- * significantly different from reference category ($p < 0.05$)

Notes: Data in tables may not sum due to rounding.

Note to readers

This is the final release of Shipping in Canada as the Marine Origin and Destination Surveys have been discontinued.

1.	Total cargo handled at Canadian ports and marine terminals	16
2.	International cargo handled at Canadian ports and marine terminals	16
3.	Domestic cargo handled at Canadian ports and marine terminals	17

Highlights

- In 2011, Canadian ports and marine terminals handled 466.1 million metric tonnes (Mt) of cargo, up 3.5% from the 2010 level. This was the second consecutive annual increase.
- The ports and marine terminals handled 341.5Mt of international cargo, a 2.2% increase from 334.2Mt in 2010. The major contributors by tonnage to this increase were shipments of iron ore and concentrates (up 2.3Mt), salt (up 1.6Mt), and potash (up 1.4Mt). However, these increases were partially offset by reductions in shipments of crude petroleum (down 2.9Mt) and wheat (down 1.5Mt).
- In 2011, the tonnage of domestic cargo handled rose to 124.6Mt from 116.4Mt in 2010, driven primarily by growth in crude petroleum (up 2.2Mt), fuel oils (up 2.0Mt) and wheat (up 1.5Mt).
- The volume and tonnage of international containerized cargo handled in 2011 at Canadian ports and marine terminals increased slightly over the 2010 levels. The volume grew to 4.6 million twenty-foot equivalent units (TEUs) from 4.5 million TEUs, while the tonnage reached 40.6Mt from 38.7Mt in 2010.
- Canada's marine freight shipments to and from the United States declined in 2011 to 96.6Mt, down 6.2% from 2010.
- International marine shipments between Canada and countries other than the United States grew to 245.0Mt, a 6.0% increase over the 231.2Mt handled in 2010. This is the highest level of shipments in more than two decades and was mainly driven by outbound cargo shipments to China (up 5.5Mt) and South Korea (up 4.9Mt).
- The 17 Canadian Port Authorities (CPAs) handled 285.2Mt of cargo in 2011, an increase of 6.0% from the 269.0Mt handled in 2010. These ports and terminals moved 61.2% of all marine cargo handled in Canada in 2011, up from 59.7% in 2010 and 57.2% in 2009.
- Port Metro Vancouver was Canada's busiest port in 2011, handling 107.6Mt of marine cargo, an increase of 2.8% over the 104.7Mt moved in 2010. The commodities primarily responsible for this increase were coal (up 1.8Mt) and potash (up 1.7Mt). These gains were partially offset by reductions in the tonnages of crude petroleum, down 1.8Mt.
- The port of Québec, including Lévis, experienced the largest gain (up 4.4Mt) in tonnage handled, rising to 29.0Mt from 24.6Mt in 2010. This growth was primarily driven by a 2.3Mt or 61.9% increase in tonnages of iron ores and concentrates.
- The port of Hamilton saw the largest decline in tonnage shipped, dropping to 10.0Mt, or 12.2% below the 11.4Mt handled in 2010. This decrease was primarily attributable to a 1.6Mt or 31.4% reduction in the tonnage of iron ores and concentrates handled at the port.
- The port of Saint John, New Brunswick saw a rise of 2.9% in its tonnage handled in 2011, to 31.5Mt from 30.6Mt in 2010, due mainly to an increase (up 0.8Mt) in shipments of crude petroleum.
- Marine shipments at the port of Montréal, including Contrecoeur, rose 3.1Mt to 27.9Mt from the 2010 level. This growth was primarily due to a 41.9% increase in tonnages of gasoline and aviation turbine fuel, as well as a 36.3% increase in the tonnages of fuel oils.
- The port of Come-By-Chance shipped 27.4Mt in 2011, up 1.2% from the 27.1Mt handled in 2010. This growth was mainly attributable to a 1.2Mt or 5.5% rise in shipments of the port's primary commodity, crude petroleum.

- In 2011, the tonnage of marine cargo handled at the port of Sept-Îles, including Pointe-Noire, reached 25.8Mt, up 1.2Mt from the 24.6Mt in 2010. This increase was due to increased shipments of iron ores and concentrates to China.
- At Port Hawkesbury shipments continued to trend downward in 2011, falling 3.6% to 23.7Mt. Activity at the port was dominated by shipments of crude petroleum which had decreased in each of the last two years.
- The port of Prince Rupert experienced an increase of 21.4% in marine tonnage handled to 18.8Mt in 2011 compared with 15.5Mt in 2010. This growth was mainly attributed to a 27.5% increase in coal shipments.
- At Port-Cartier there was a decrease of 0.3Mt or 1.7% in marine movements due primarily to a 0.6Mt or 30.3% reduction in tonnage of wheat.

Shipping in Canada 2011

The Canadian economy continued to strengthen in 2011 after the global economic slowdown of 2009. Real gross domestic product increased 2.4%, following the 3.2% increase in 2010¹. The nominal value of total merchandise trade rose 11.7% to \$914.1 billion. Both exports and imports rose, 13.2% and 10.2% respectively².

The recovery from the economic downturn of 2009 resulted in an upswing in marine activity at Canada's ports and marine terminals in 2011. Total cargo handled reached 466.1Mt, up 3.5% over the 2010 level of 450.5Mt. This growth was attributed to increases in both domestic³ and international cargo shipments.

International Marine Traffic

In 2011, the growth in global trade⁴ was reflected in higher levels of international cargo (between Canadian and foreign ports) handled at Canadian ports, which rose 7.4Mt to 341.5Mt. The gain was almost exclusively the result of increases in outbound shipments destined for Asia. International marine cargo departing from Canadian ports rose by 7.3Mt to reach 227.3Mt in 2011, primarily on the strength of increased shipments to both China (up 5.5Mt) and South Korea (up 4.9Mt). In contrast, over the same period, marine cargo shipments to the United States declined by 5.0Mt.

Principal commodities contributing to the overall rise in international outbound cargo were coal (up 4.2Mt); iron ores and concentrates (up 1.8Mt); lumber (up 1.5Mt); and potash (up 1.4Mt).

Total international shipments of crude petroleum remained the country's dominant commodity in 2011.

Container Traffic

Both the tonnage and volume of international container traffic handled at Canadian ports rose in 2011. While the tonnage rose 5.1% to 40.6Mt from 38.7Mt, the volume of containers increased marginally by 0.8% to 4.6 million TEUs from 4.5 million TEUs in 2010. The main driver behind the overall growth was increased two-way trade with China.

The largest increases in both the tonnage (up 1.0Mt) and volume (up 63,738 TEUs) of international containerized cargo were registered at the port of Prince Rupert. However, Port Metro Vancouver continues to handle the majority (53%) of the country's international containerized cargo tonnage.

Canada – United States Cargo

Canada's marine cargo traffic to and from the United States declined 6.2% in 2011 to 96.6Mt, down from 103.0Mt in 2010. This drop was precipitated by decreased shipments of both outbound (down 7.2%) and inbound (down 4.2%) freight.

The declines in marine cargo shipments from Canada to ports in the United States were driven by reductions in crude petroleum (down 14.1% or 3.2Mt) and fuel oils (down 15.0% or 1.4Mt). Outbound cargo to both United States Atlantic and Gulf and United States Pacific ports each declined (down 11.0% or 5.0Mt and 5.8% or 0.5Mt, respectively). Only shipments to United States Great Lakes ports showed an increase of 3.9% or 0.5Mt.

1. Statistics Canada, CANSIM 380-0002.

2. Statistics Canada, CANSIM 228-0003.

3. Note that domestic cargo is handled twice by the Canadian ports and marine terminal system, once when loaded and again when unloaded.

4. World Trade Organization, International Trade Statistics 2012.

The reduced tonnage in inbound cargo, derived primarily from declines in coal (down 3.0Mt or 27.0%), was offset somewhat by increases in arrivals of fuel oils, and iron ores and concentrates (each up 0.7Mt). Geographically, cargo arriving from United States Great Lakes ports declined 3.3Mt or 13.4%. At the same time, arrivals from United States Atlantic and Gulf ports were up by 1.7Mt or 26.9%, while those from United States Pacific ports grew 0.2Mt or 4.7%.

During 2011, the proportion of marine cargo (38.7%) moved between Canada and the United States by ships registered in Canada remained unchanged from the year previous. These Canadian-flagged vessels continue to occupy a dominant position regarding cargo shipments between Canada and ports in the United States Great Lakes Region where they moved 89.4% of the tonnage, compared with 86.4% in 2010. On the United States' Pacific coast, Canadian-registered vessels handled 24.2% of the tonnage, up slightly from 23.9% in 2010. Shipping activities between Canada and ports in the United States Atlantic and Gulf Region were conducted primarily by foreign-flagged vessels.

Canada Overseas Cargo

International marine tonnage shipped between Canada and countries other than the United States grew 6.0% to 245.0Mt in 2011 from 231.2Mt in 2010, due to an increase in both outbound and inbound shipments.

The tonnage of outbound shipments of marine cargo to countries other than the United States reached 163.7Mt (up 12.2Mt). The majority of the gains were almost exclusively in freight destined for Asia (up 12.5Mt or 14.7% over 2010), which comprised almost 59.4% of Canada's outbound cargo. Increased shipments to South America (up 1.4Mt or 13.8%) were completely offset by a noticeable decline in cargo departing for Africa (down 1.4Mt or 27.4%).

The principal commodities responsible for the increase in outbound shipments to countries other than the United States were coal (up 4.8Mt or 12.7%), and iron ores and concentrates (up 2.2Mt or 7.4%).

In 2011, Canadian ports saw an increase in the inbound shipments of cargo from countries other than the United States, with tonnages rising to 81.3Mt from 79.8Mt in 2010. The main contributors to this growth were shipments from Africa (up 2.5Mt or 12.5%), Central America and Antilles (up 1.1Mt or 27.9%), and the Middle East (up 0.7Mt or 7.8%). These gains were partially offset by reductions in cargo from South America (down 2.5Mt or 19.0%).

Canadian-registered vessels continued to carry a small proportion (0.1%) of the marine cargo shipped between Canada and overseas. The majority of foreign (excluding the United States) marine cargo was carried by vessels registered in Panama (25.8%), Liberia (12.4%), Hong Kong (9.2%) and Greece (8.4%).

Domestic Cargo

In 2011, Canadian ports and marine terminals handled 124.6Mt of domestic cargo, up 7.1% from 116.4Mt in 2010. This increase was driven primarily by crude petroleum (up 2.2Mt or 8.3%); fuel oils (up 2.0Mt or 26.7%) and wheat (up 1.5Mt or 18.3%).

Each of Canada's regions participated in the growth of domestic cargo in 2011 with variances noted by region and commodity.

The Atlantic Region experienced a 7.2% growth in 2011 driven by increased movements of crude petroleum (up 2.2Mt or 8.5%), and stone, sand, gravel and crushed stone (up 0.7Mt or 49.6%).

The St. Lawrence Region saw its 2011 shipments increase by 3.3Mt or 12.6% over the prior year. This growth was primarily attributed to increases in fuel oils (up 1.5Mt or 41.4%), iron ores and concentrates (up 0.9Mt or 22.1%), and wheat (up 0.8Mt or 23.0%).

The Great Lakes Region reported a 1.0Mt or 3.4% increase over 2010 due mainly to increases in shipments of salt (up 1.0Mt or 33.3%), wheat (up 0.6Mt or 14.5%) and colza seeds (canola) (up 0.6Mt or 57.6%). Partially offsetting this rise was a drop in shipments of stone, sand, gravel and crushed stone (down 0.8Mt or 20.8%).

The Pacific Region showed an increase of 1.2Mt or 5.2% over 2010 due to increased shipments of wood chips (up 0.7Mt or 7.5%), limestone (up 0.6Mt or 34.0%) and stone, sand, gravel and crushed stone (up 0.5Mt or 17.1%). This was partially offset by a reduction in shipments of logs and other wood in the rough (down 0.9Mt or 13.4%).

Port Authorities

The 17 Canadian Port Authorities⁵ (CPAs) handled 285.2Mt of cargo in 2011, an increase of 6.0% from the 269.0Mt handled in 2010. These ports and terminals moved 61.2% of all marine cargo handled in Canada in 2011, compared with 59.7% in 2010.

Port Metro Vancouver remained the nation's busiest port in 2011, handling 107.6Mt of marine cargo, an increase of 2.8% over the tonnage handled in 2010. Increases in both international and domestic activity contributed to the overall growth in shipments. The commodities primarily responsible for this increase were coal (up 1.8Mt) and potash (up 1.7Mt). These gains were partially offset by a 1.8Mt reduction in the tonnage of crude petroleum handled at the port in 2011. The port retained its position as Canada's leading container facility, handling 55.0% of all international containers in 2011. In 2011, the tonnage of containerized cargo handled rose 3.5% to 21.4Mt from 20.7Mt in 2010. However, the volume of this freight remained virtually unchanged at 2.5 million TEUs.

The port of Saint John, New Brunswick realized a 2.9% growth in shipping activity as tonnage handled at the port rose to 31.5Mt in 2011. The growth in tonnage was largely the result of higher international shipments of crude petroleum (up 1.0Mt or 8.6%), fuel oils (up 0.6Mt or 10.0%) and other refined petroleum and coal products (up 0.5Mt or 16.9%). The volume of international containerized cargo handled declined 9.0% to 42,760 TEUs from 47,013 TEUs in 2010, while its tonnage declined 7.6% to 257,646 tonnes from 278,741 tonnes the year previous.

The tonnage handled at the port of Québec, including Lévis, rose to 29.0Mt in 2011 from 24.6Mt in 2010. The gain was due primarily to higher international shipments of iron ores and concentrates (up 2.2Mt or 60.2%); and crude petroleum (up 1.2Mt or 13.6%).

In 2011, the port of Montréal, including Contrecoeur, handled 27.9Mt of cargo, an increase of 12.5% over the 24.8Mt moved in 2010. Activity at the port grew on the strength of higher levels of inbound freight, both international (up 1.9Mt) and domestic (up 1.7Mt). In particular, substantial increases were noted in inbound shipments of gasoline and aviation turbine fuel (up 1.5Mt or 44.0%) and fuel oils (up 1.3Mt or 88.4%). Even as the tonnage of international containerized freight handled rose 3.7% to reach 12.1Mt, the volume was virtually unchanged at 1.2 million TEUs. Shipments of international containerized cargo represented over 43% of the total marine cargo handled at this port.

The port of Sept-Îles, including Pointe-Noire, registered an increase of 1.2Mt to 25.8Mt in tonnage handled in 2011 as compared with the prior year. This gain was due predominately to international departures, which were almost exclusively of iron ores and concentrates. This commodity accounted for 88.1% of all the freight handled at the port.

The total cargo handled at the port of Prince Rupert rose to 18.8Mt in 2011 from 15.5Mt in 2010. Strong growth in outbound shipments of the port's principal commodity, coal, was largely responsible for the gain. Over the last three years, the tonnages handled rose from 3.3Mt in 2009 to reach 8.8Mt in 2011. In 2011, the number of TEUs of international containerized cargo handled rose 18.6% to 405,717 from 341,979 in 2010, while its tonnage grew by 39.6% to 3.6Mt from 2.5Mt over the same period.

In 2011, the port of Hamilton experienced a 12.2% drop in tonnage handled, falling to 10.0Mt from 11.4Mt in 2010. This reduction was due primarily to a drop in international inbound shipments of iron ores and concentrates (down 75.5% from 2.4Mt to 0.6Mt), as a result of reduced demand from Hamilton's steel mills.

Total cargo handled at the port of Halifax in 2011 fell to 9.9Mt from 10.2Mt the previous year. The decrease was entirely attributable to a reduction in international cargo (down 0.7Mt or 8.7%). The largest contributor to this decline was inbound shipments of crude petroleum which dropped 24.9% (from 2.1Mt in 2010 to 1.6Mt in 2011).

5. Canadian Port Authorities created under the *Canada Marine Act* (1998) were: Belledune, Fraser River, Halifax, Hamilton, Montréal, Nanaimo, North Fraser River, Port Alberni, Prince Rupert, Québec, Saguenay(Chicoutimi), Saint John, Sept-Îles, St. John's, Toronto, Thunder Bay, Trois-Rivières, Vancouver and Windsor Ontario. As of January 2008, Fraser River, North Fraser River and Vancouver were merged to create Vancouver Fraser Port Authority (Port Metro Vancouver). In February 2012, the Port of Oshawa was designated a port authority under the *Canada Marine Act*.

Both the tonnage and volume of containerized cargo shipments at the port were lower in 2011. The tonnage of international containerized cargo handled at Halifax in 2011 fell by 4.8% to 3.1Mt while the TEU count dropped to 369,002 from 392,328 the year previous.

In 2011, total cargo handled at the port of Thunder Bay increased by 12.7% to 7.6Mt over the 6.8Mt handled in 2010. This represents a reversal after three consecutive years of reductions in tonnage handled at the port. The principal drivers behind this increase were domestic outbound shipments of wheat (up 0.9Mt or 25.4%) and colza seeds (canola) (up 0.4Mt or 79.1%).

The port of Windsor, Ontario experienced a 7.4% decrease in marine shipments in 2011, falling to 4.9Mt. Increases in domestic shipments (up 6.7%) were insufficient to offset the decline in international activity (down 18.4%).

Cargo handled at the port of Trois-Rivières reached 3.2Mt in 2011, an 11.0% increase over the 2.9Mt handled in 2010. The majority of this increase resulted from greater international activity. Specifically, gains were noted in outbound shipments of wheat (up 0.2Mt or 40.0%) and inbound shipments of alumina (up 0.1Mt or 28.1%).

For the second consecutive year, the port of Nanaimo experienced a strong growth in marine activity, with marine cargo up 0.8Mt to reach 2.2Mt in 2011. Both international and domestic shipments contributed to the increase in overall shipments.

In 2011, marine activity at the port of Belledune fell 4.4% to 2.0Mt. Reductions in both domestic and international cargo were responsible for the decline. After increasing to 95,666t in 2010, domestic departures of stone, sand, gravel and crushed stone were almost negligible in 2011. In addition, reductions of 12.9% (to 0.8Mt) were reported in international arrivals of coal.

The port of Toronto experienced a strong year of marine activity in 2011, resulting in 1.8Mt of cargo handled. This reflected a 20.9% increase over the 1.5Mt moved in 2010. Both domestic and international inbound shipments contributed to this growth.

Total tonnage handled at Port Alberni rose sharply in 2011 (up 34.8%) to reach 1.4Mt, compared with 1.0Mt for 2010. This increase was driven by a 62.2% (or 0.3Mt) rise in international departures of the port's primary commodity, logs and other wood in the rough.

The tonnage of cargo handled at the port of St. John's, Newfoundland and Labrador in 2011 declined to 1.4Mt compared with 1.5Mt the prior year, with both domestic and international shipments contributing to the decline. The largest tonnage changes were reductions in the outbound domestic shipments of fuel oils (down 69,366 tonnes), and alcoholic and non-alcoholic beverages (down 51,129 tonnes).

Marine activity at the port of Saguenay declined to 0.3Mt in 2011 from the 0.4Mt experienced in 2010. Both domestic and international shipments contributed to the decline. In particular, inbound domestic tonnage of salt fell 45.2% to 53,655 tonnes. In addition, outbound international shipments of wood pulp decreased 32.5% to 52,736 tonnes.

Data quality, concepts and methodology

Introduction

The statistics in this publication were collected under the authority of the *Statistics Act* (Revised Statutes of Canada, 1985, chapter S19). The statistics are derived from two surveys: the Coastwise Shipping Survey (Survey number 2751) and the Marine International Freight Origin Destination Survey (Survey number 2791).¹ The purpose, populations, data sources, and data quality for these surveys are discussed in the following sections.

Purpose of the surveys

These surveys collect data on:

- Coastwise or domestic marine transport - the carriage of cargo by ships between Canadian ports in Canadian waters; and,
- International marine transport – the carriage of cargo between Canadian ports and foreign ports in the United States or overseas.

The information collected in these surveys includes the description and quantities of commodities loaded and unloaded at Canadian ports and marine terminals by vessels calling at those facilities, and the origin and destination of those commodities. Data are aggregated for publication of commodity traffic by Canadian port and foreign country of origin or destination.

Statistics Canada uses these data as one input to Canada's System of National Accounts. The data are also used by Transport Canada, other federal departments, provincial ministries, transportation companies, consulting firms, universities and foreign governments. This information is used to analyse transportation activities, for marketing and economic studies, and to assess the industry's performance.

Survey populations

For each survey it is possible to define a target population as all the units (e.g., ships) for which data were intended to be collected and a survey population as all the units for which the survey actually provides data. The survey population may differ from the target population when it is not possible to identify or to survey all of the units within the target population.

The target populations of the Coastwise Shipping Survey and the Marine International Freight Origin Destination Survey are all ships that carry cargo between Canadian ports or between Canadian ports and foreign ports.

The Coastwise Shipping Survey population is somewhat different from the target population. It consists of ships engaged in domestic shipping at Canadian ports, with the exception of:

- i. cargo vessels less than 15 net register tons (NRT);
- ii. tugs or other vessels under 15 gross register tons (GRT);
- iii. Canadian naval ships;

1. For more information see Coastwise Shipping Survey: www.statcan.ca/english/sdds/2751.htm and International Freight Origin Destination Survey: www.statcan.ca/english/sdds/2791.htm.

- iv. fishing vessels;
- v. research vessels;
- vi. ballast movements for towboat and ferry operators on the West Coast ports;
- vii. cargo carried in trucks and rail cars on domestic vehicle ferries.

This limited survey field may have a significant impact on the statistics reported for some commodities, regions and ports such as the Pacific Coast, where a number of tugs that are under the GRT threshold are engaged in the towing of log booms. The exclusion of ferry traffic will also affect the statistics for cargo transported to and from islands such as Newfoundland, Prince Edward Island and Vancouver Island. However, this cargo should be reflected in statistics collected for freight transported by the truck and rail modes.

The survey population for the Marine International Freight Origin Destination Survey includes vessels engaged in international shipping at Canadian ports with the exception of (i) fishing boats registered in Canada or abroad, (ii) maintenance and service ships such as icebreakers, (iii) research vessels and (iv) other non-commercial vessels such as hospital ships.

Data sources

Data for the Coastwise Shipping Survey are collected directly from the owners, operators, agents or officers of ships engaged in domestic shipping. The data are reported on one of two questionnaires, either the *S.1, Domestic Shipping Report* or the *S.4, Towboat and Ferry Operators Shipping Report*. The operators of cargo-carrying ships arriving and departing Canadian ports or marine terminals complete these reports for each such arrival and departure. The S.1 Report provides the following information: vessel name, country of registration, the vessel's gross and net registered tonnage, cargo description, tonnage and ports of loading and unloading. The S.4 Report is used only on the West Coast by operators of tugs, cargo barges and ferries for monthly reporting of coastal shipping. These operators do not report ballast movements. The S1 and S4 Reports are sent to Statistics Canada each month.

Information on international shipping is collected from the Advance Commercial Information (ACI) program & the A6 General Declaration and manifests required by the Canada Border Services Agency (CBSA) for each ship loading or unloading cargo in Canada that either originated in or is destined to a foreign country. Local CBSA employees send copies of these documents to Statistics Canada. In some cases, marine agents or port authorities send equivalent reports to Statistics Canada. The data provided by the ACI program & the Form A6 and its annexes provide information on: the vessel's name and country of registration, registered gross and net tonnage, and information such as the description of the cargo, tonnage containerizes information and ports where commodities will be loaded and unloaded. These variables constitute the database for statistics on international shipping.

Data quality

All statistical surveys are subject to errors. The total error of a survey is defined as the difference between the survey estimate and the actual value for the target population. Survey errors can be classified as "sampling" or "non-sampling" errors. The marine transport surveys are censuses and are therefore not subject to sampling errors.

There are four main types of non-sampling errors:

- i. Coverage errors (when the survey frame does not thoroughly cover the target population);
- ii. Response errors (when a respondent provides inaccurate information);
- iii. Non-response errors (when a respondent does not respond to all or part of the questionnaire) and,
- iv. Processing errors (errors made during data capture, coding, and editing).

The Coastwise Shipping Survey is thought to be more affected by coverage errors than the Marine International Freight Origin Destination Survey. The survey population is smaller than the target population due to the size threshold and the various ship types that are exempted (e.g., vehicle and rail ferries) and the practical difficulty of identifying the fleet of all ships that are active in the domestic transport of cargo. With respect to the Marine International Freight Origin Destination Survey, customs rules apply to all ships arriving from or departing for foreign ports. However, Statistics Canada has only limited tools for identifying missing shipping documents.

Both surveys have significant exposure to response error, particularly in terms of the reported commodities. The marine carrier of domestic and international cargo is not always able to provide descriptions that are sufficiently detailed to accurately code the commodity. Terms such as general cargo are often used in cases where the carrier is unsure of the exact contents of a container or when there are a number of commodities being transported in one shipment. As result, residual categories such as “Other manufactured and miscellaneous goods” and “Other chemical products and preparations” may be overestimated while the true commodity is understated. Respondents may also use incorrect conversion factors in estimating the weight of a shipment.

Non-response errors are expected to have more of an effect on the Coastwise Shipping Survey. Shipping reports are not submitted for all vessel traffic Canadian ports. It is known that there is a significant amount of under-reporting for the Pacific Coast and the Mackenzie River. While it is assumed that the reporting to the Canada Border Services Agency (CBSA) of international traffic is fairly comprehensive, there are occasions when reports are not forwarded to Statistics Canada, particularly for ports in the Canadian Arctic and other remote areas that do not have local customs offices.

Both surveys are subject to processing errors during data entry, including errors in transcribing and coding information and in converting cargo quantities from non-weight units (e.g., barrels or cubic metres to kilograms). Errors may also be introduced during editing and imputation procedures that are used to correct data that appear to be erroneously reported or partially reported. A number of techniques are used to detect and resolve these errors including micro and macro analysis of the data for congruency and consistency with information acquired from other sources (e.g., cargo statistics from port authorities and economic statistics from other Statistics Canada divisions).

Appendix I

Glossary

Terms related to reporting forms

Advance Commercial Information (ACI): The Canada Border Services Agency (CBSA) introduced the ACI program to replace, at the first port of call, A6/A6A paper reporting with electronic reporting of key variables for vessels arriving from any port outside Canada. These include such information as name and nationality of vessel, net and gross register tonnage, last port of call and cargo particulars such as tonnage unloaded and handling port. The program was implemented in two phases. Phase 1 was implemented in April 2004 and applied to cargo loaded at foreign ports, excluding the United States. Cargo loaded in the United States was required to be reported using ACI beginning in July 2006.

A6 General declaration: This is an administrative document which is submitted along with supporting cargo reports to the Canada Border Services Agency (CBSA). The document should be completed for every vessel arriving from outside Canada or departing for any port or place outside Canada with the exception of those required to report using ACI. The A6 General Declaration provides such information as name and nationality of vessel, net and gross register tonnage, next/last port of call, and cargo particulars such as tonnage loaded or unloaded, and handling port.

S.4 Towboat and ferry operators shipping report: This report is used principally by members of the British Columbia Council of Marine Carriers to report the domestic shipping activities of tug, barge, scow and ferry operators on the west coast. The report is filed on a monthly basis and excludes ballast movements.

S.1 Domestic shipping report: This report is completed by ships' officers or operators of vessels engaged in domestic shipping arriving at or departing from Canadian ports. It contains such information as: vessel name, net and gross register tonnage, commodity description and tonnage, ports of loading and unloading. This is the principal source of data for the production of domestic shipping statistics.

Terms related to cargo

Ballast movement (arrival or departure): An arrival at a port is considered ballast if there is no cargo unloaded from the vessel at that port. A departure from a port is considered ballast if there is no cargo loaded on the vessel at that port. Ferry (passenger and cars) movements also count as ballast movements since there is no loading/unloading of commercial cargo.

Commodity: Cargo loaded or unloaded is classified according to a structure based on Statistics Canada's Standard Classification of Transported Goods (SCTG).

Lightering: This term refers to the loading/unloading of cargo in a harbour rather than at a dock or wharf. Cargo tonnage is included with port totals.

In-transit cargo: Foreign cargoes handled at Canadian ports en route for or from a third country. Since tonnages are included in port totals, the statistics do not necessarily reflect import and export tonnages, but are rather focused on port activity.

Terms related to ports

Destination: The port of unloading of cargo is considered the port of destination. This is not necessarily the point of ultimate destination of cargo, which may be inland. Relative to the international shipping sector, this is the foreign port or country of unloading and not necessarily the ultimate country of destination.

Origin: The port of loading of cargo is considered the port of origin. This is not necessarily the point of actual origin of cargo, which may be inland. Relative to the international shipping sector, this is the foreign port or country of loading and not necessarily the actual point of origin.

Handling port: The Canadian port of loading/unloading of cargo. This does not necessarily coincide with the Customs Port, or the municipality of the same name.

Atlantic region: This region consists of Canadian ports on the Atlantic Ocean and Arctic Waters, and that portion of the Gulf of St. Lawrence which is east of the inland waters as defined in the Canadian Shipping Act.

Great Lakes region: This region consists of Canadian ports located along the St. Lawrence river west of the Ontario-Quebec border, and on the Great Lakes.

Pacific region: This region consists of Canadian ports located on the Pacific Coast and the Mackenzie River.

St. Lawrence River region: This region consists of Canadian ports located on the St. Lawrence river from the Ontario-Quebec border eastward, along the north shore to 63° west longitude and along the south shore to Cap des Rosiers.

Terms related to vessels

Gross register tonnage: The capacity in cubic feet of the spaces within the hull and of the enclosed spaces above the deck of a vessel, divided by 100. This is the figure as reported on the A6 General Declaration or the S1 and S4 reporting forms.

Net register tonnage: The gross register tonnage (as defined above) minus the capacity utilized by propelling machinery, fuel, and personnel accommodation.

In ballast: A vessel is considered arriving or departing "in ballast" if no cargo is loaded when leaving a Canadian port or no cargo is unloaded when arriving at a Canadian port.

LO LO: an acronym for "lift on, lift off". System of loading and discharging whereby cargo is lifted on and off a ship by the use of cranes.

RO RO: An acronym for "roll on, roll off". System of loading and discharging a ship whereby the cargo is driven on and off.
